

***IT company fresher interview questions with simple answers for beginners.***

**1.SELF INTRODUCTION**

Good morning sir/madam.

First of all, thank you for giving me this opportunity to introduce myself.

My name is Bogapathi Bhargavi, and I am from Rayachoty, Andhra Pradesh.

I recently completed my B.Tech in Computer Science Engineering from MJR College of Engineering and Technology.

I have basic knowledge of Python, Machine Learning, and NLP.

I completed a project on Smart Document Classifier and Analyzer using NLP techniques. Through this project, I learned text processing, classification, and teamwork skills.

I also completed a Python Internship and attended a Python Workshop to improve my technical knowledge.

Apart from studies, I am a National Level Rugby Player, which helped me improve my discipline, confidence, and team spirit.

I am a hardworking and positive person.

As a fresher, I am eager to learn new things and give my best to the organization

**2. Why do you want to join the IT industry?**

"I want to join the IT industry because I am interested in technology and problem-solving. I want to improve my technical skills and build a successful career."

**3. What are your strengths?**

Hardworking

Quick learner

Positive thinking

Team player

Good communication skills

Example:

"My strength is that I am a quick learner and I can adapt to new technologies easily."

**4. What are your weaknesses?**

"I sometimes take extra time to complete work because I focus on accuracy, but I am improving my speed."

### 5. Why should we hire you?

I am a fresher with good learning ability, positive attitude, and basic technical knowledge. I am ready to learn new technologies and work hard for the company.

### 6. What is your final year project?

"My project is Smart Document Classifier using NLP. The main goal of the project is to classify documents automatically using Natural Language Processing techniques."

### 7. What programming languages do you know?

"I have basic knowledge of Python, SQL, HTML, and CSS."

### 8. What is Python?

Python is a high-level programming language. It is simple, easy to learn, and widely used in web development, data science, AI, and automation.

### 9. What is OOPs?

OOPs means Object-Oriented Programming System.

Main concepts:

Class

Object

Inheritance

Polymorphism

Encapsulation

Abstraction

### 10. What is SQL?

SQL stands for Structured Query Language. It is used to store, retrieve, and manage data in databases.

### 11. Difference between list and tuple in Python

|      |       |
|------|-------|
| List | Tuple |
|------|-------|

|         |           |
|---------|-----------|
| Mutable | Immutable |
|---------|-----------|

|         |         |
|---------|---------|
| Uses [] | Uses () |
|---------|---------|

|            |               |
|------------|---------------|
| Can modify | Cannot modify |
|------------|---------------|

### 12. What is your short-term goal?

"My short-term goal is to get a job in a good IT company and improve my technical skills."

**13. What is your long-term goal?**

"My long-term goal is to become a successful software engineer and take higher responsibilities in the company."

**14. Are you comfortable working in a team?**

Yes, I am comfortable working in a team because teamwork helps in learning new things and completing work effectively."

**15. Do you have any questions for us?**

You can ask:

What technologies will I work on?"

"Is there any training program for freshers?"

What are the growth opportunities in the company?"

**16. What is Python?**

Python is a high-level, easy-to-learn programming language used for web development, automation, data science, AI, and software development.

**17. What are the features of Python?**

Simple syntax

Easy to learn

Platform independent

Object-oriented

Open source

Large library support

Example:

```
list1 = [1, 2, 3]
```

```
tuple1 = (1, 2, 3)
```

**18. What is indexing in Python?**

Indexing means accessing elements using position numbers.

Example:

```
a = "Python"
```

```
print(a[0]) # P
```

### 19. What is slicing?

Slicing is used to get part of a sequence.

Example:

```
a = "Python"
```

```
print(a[1:4]) # yth
```

### 20. What are mutable and immutable data types?

Mutable

Can be changed. Example: List, Dictionary

Immutable

Cannot be changed. Example: String, Tuple

### 21. What is a variable?

A variable is used to store data.

Example:

```
name = "Bhargavi"
```

```
age = 22
```

### 22. What are data types in Python?

int

float

string

list

tuple

set

dictionary

boolean

### 23. What is the difference between == and = ?

Assignment operator      Comparison operator

Example:

```
a = 10
```

```
a == 10
```

#### 24. What is a function?

A function is a block of reusable code.

Example:

```
def add(a, b):
```

```
    return a + b
```

#### 25. What is the difference between break and continue?

break    continue

Stops loop      Skips current iteration

#### 26. What is a loop?

Loops are used to repeat code.

Types:

for loop

while loop

Example:

```
for i in range(5):
```

```
    print(i)
```

#### 27. What is a dictionary?

Dictionary stores data in key-value pairs.

Example:

```
student = {"name": "Bhargavi", "age": 22}
```

#### 28. What is exception handling?

It handles runtime errors using try and except.

Example:

```
try:
```

```
print(10/0)
```

except:

```
print("Error")
```

29. What is the difference between `append()` and `extend()`?

| <code>append()</code> | <code>extend()</code>  |
|-----------------------|------------------------|
| Adds single element   | Adds multiple elements |

30. What is inheritance in OOPs?

Inheritance allows one class to get properties from another class.

31. What is polymorphism?

Polymorphism means one function can perform different tasks.

32. What is encapsulation?

Encapsulation means wrapping data and methods into one unit (class).

33. What is a module in Python?

A module is a file containing Python code and functions.

Example:

```
import math
```

34. What is pip?

pip is a package manager used to install Python libraries.

Example:

```
pip install numpy
```

35. What is NumPy?

NumPy is a Python library used for numerical calculations and arrays.

36. What is Pandas?

Pandas is used for data analysis and handling tables/dataframes.

37. What is the difference between `remove()`, `pop()`, and `del`?

| Method                | Use           |
|-----------------------|---------------|
| <code>remove()</code> | Removes value |

pop() Removes by index

del Deletes object

### 38. What is recursion?

A function calling itself is called recursion.

### 39. Why do you like Python?

"I like Python because it is simple, readable, and easy to learn. It is widely used in many technologies like AI, ML, and web development."
